

Magpie is a leading provider of software engineering services and is widely recognized for our in-depth technical skills, proven experience and customer-centric values.

*Magpies:
Trusted professionals for
software excellence*

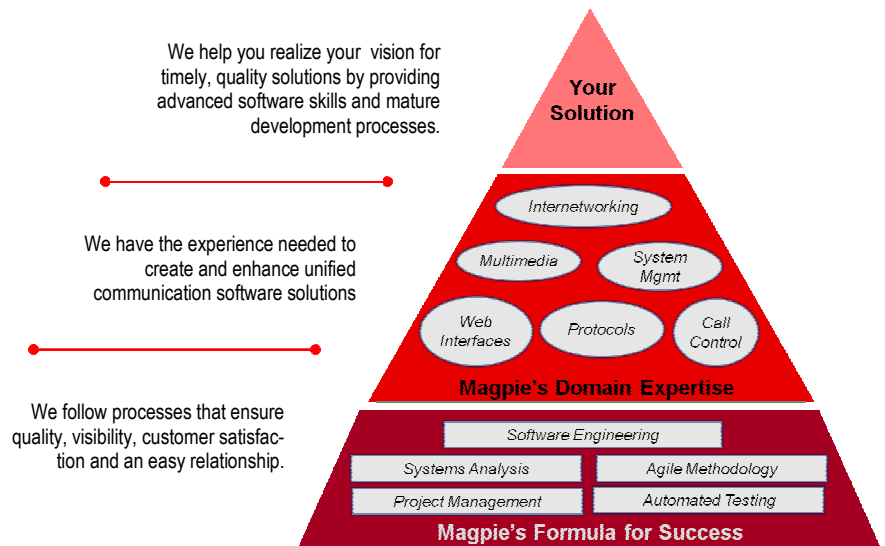

Magpie's UC software development expertise includes:

Protocols (SIP, IMS, H.32x, H.264, XML, XMPP, MRCP, VXML)
Communication Enablement
Presence
Call & Workflow Control
Multi-media: Voice, Video, SMS, IM, Email, Voicemail
System Management & User Controls
Web-based UC applications & Web services

Companies that specialize in Unified Communications solutions have leveraged Magpie's capabilities to:

- Migrate to newer protocols, such as SIP, MRCP and VXML
- Add presence and communication enablement
- Build Web portals, Dashboards, SDKs, and Web services
- Transform desktop applications into Web-based applications
- Integrate, enhance and/or build upon single- and multi-vendor platforms, including: Avaya, Cisco, Nokia, 2Wire, Polycom, SS8, Microsoft, Alcatel-Lucent, LGS, Sun, Jabber, IBM, BEA
- Train employees on SIP and IMS

Magpie Unified Communication Capabilities

"Over the past 10 months, I have had the opportunity to call upon Magpie's services for architectural design, software development and systems testing. The Magpie management team and development team were always very responsive, very knowledgeable, and very experienced. We were developing a SIP platform for the very first time and their expertise was extremely valuable. They met tight schedule commitments and delivered quality software."

Lydia Runnels, CSDVRS, Vice President of Product Development
